1 General description

DKAC-K, DKAC-D, MBAC-K, MDAC-K, PNAC-K devices are climate gateways that control machines of Daikin, Mitsubishi, Midea and Panasonic, according to the reference, so that the user can integrate the control of the temperature, operating modes, speeds of their fan and which, typically, would be made from the remote control of the unit from weather and ventilation, into KNX system.

These references are configured with the same Bes application program.

For the communication cable which connects the gateway with the machine, it is recommended a maximum length of 1 meter.

	DKAC-K	DKAC-D	MBAC-K	MDAC-K	PNAC-K
Ambient temperatura (if the machine has temperature sensor)	Yes	No	Yes	Yes	Yes
Slave mode	Yes	No	No	Yes (it works with remote controller without slave mode)	No

2 Technical information

KNX power supply	29 Vdc of the KNX bus
KNX power consumption	20 mA of the KNX bus
Mounting / size	DIN rail / 2 modules
Connections	Connection terminal to KNX bus and terminals for machine connection
Operating modes	Heating, cooling (summer / winter), dehumidification, ventilation, or automatic
Ambient temperature ranges	Operation: - 10 ° C / 55 ° C Storage: - 30 ° C / 60 ° C Transport: - 30 ° C / 60 ° C
Regulation	According to the guidelines on electromagnetic compatibility and low voltage: EN 50090-2-2 / EN 61000-6-3:2007 / UNE-EN 61000-6-1:2007 / UNE-EN 61010-1.

3 Programming

3.1 Application program information

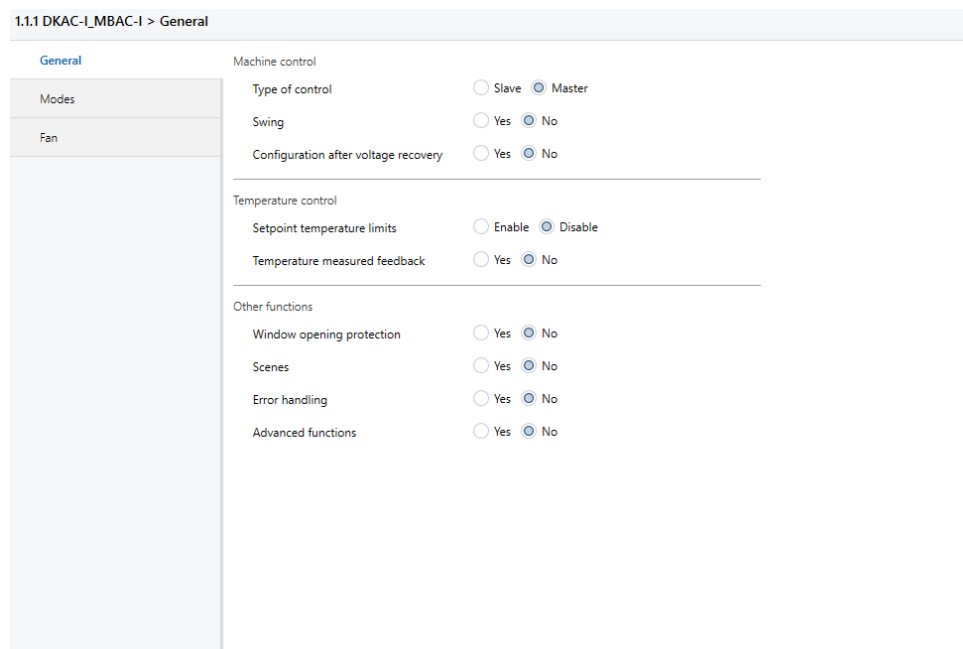

Manufacturer: Bes-Ingenium

Application: DKAC-I_MBAC-I

Maximum number of objects of communication: 255

Version: 1.0

The devices are programmed from a window parameters.

3.2 Table of objects of communication

Number	Name	Function of the object	Length	C	R	W	T	U	Type of data
0	On/off	Turn on/off the machine	1 bit	C	-	W	-	U	switch
1	On/off	Turn on/off the machine status	1 bit	C	R	-	T	-	switch
2	Setpoint	Setpoint temperature sent	2 bytes	C	R	W	T	U	temperature (°C)
3	Setpoint	Setpoint temperature sent status	2 bytes	C	R	-	T	-	temperature (°C)
4	Mode	Mode: 0=Auto; 1=Heat; 3=Cool; 9=Fan; 14=Dry	1 byte	C	-	W	-	U	

5	Mode	Mode status: 0=Auto; 1=Heat; 3=Cool; 9=Fan; 14=Dry	1 byte	C R - T -	
6	Fan	Fan: 0-50%=Low; 51-100%=High	1 byte	C - W - U	percentage (0..100%)
7	Fan	Fan status: 0-50%=Low; 51-100%=High	1 byte	C R - T -	percentage (0..100%)
8	Temperature	Temperature: Received from machine	2 bytes	C R - T -	temperature (°C)
10	Window	Open window: 0=Close; 1=Open	1 bit	C - W - U	
12	Swing	Swing: 0=Fixed position; 1=Motion	1 bit	C - W - U	switch
13	Swing	Swing status: 0=Fixed position; 1=Motion	1 bit	C R - T -	switch
14	Swing	Swing: 0-80%= Fixed position; 100%=Motion	1 byte	C - W - U	percentage (0..100%)
15	Swing	Swing status: 0-80%=Fixed position; 100%=Motion	1 byte	C R - T -	percentage (0..100%)
16	Internal ERROR	Internal ERROR: 0=No error;1=Error	1 bit	C R - T -	boolean
18	External ERROR	External ERROR: 0=No error; 1=Error	1 bit	C R - T -	boolean
19	External ERROR	External ERROR: Type	1 byte	C R - T -	ratio (0..255)
102	Scenes	Scenes	1 byte	C - W - U	scene control
103	Mode	Mode: 0=Cool; 1=Heat	1 bit	C - W - U	switch
104	Mode	Mode status: 0=Cool; 1=Heat	1 bit	C R - T -	switch
105	Fan	Fan: 0-33%=Min; 34-67%=Med; >68%=High	1 byte	C - W - U	percentage (0..100%)
106	Fan	Fan status: 0-33%=Min; 34-67%=Med; >68%=High	1 byte	C R - T -	percentage (0..100%)
21	Mode	Cool: 1=Set mode; 0=No effect	1 bit	C - W - U	switch
22	Mode	Heat: 1=Set mode; 0=No effect	1 bit	C - W - U	switch
23	Mode	Fan: 1=Set mode; 0=No effect	1 bit	C - W - U	switch
24	Mode	Dry: 1=Set mode; 0=No effect	1 bit	C - W - U	switch
25	Mode	Auto status: 1=Set; 0=Not set	1 bit	C R - T -	enable
26	Mode	Cool status: 1=Set; 0=Not set	1 bit	C R - T -	enable
27	Mode	Heat status: 1=Set; 0=Not set	1 bit	C R - T -	enable
28	Mode	Fan status: 1=Set; 0=Not set	1 bit	C R - T -	enable
29	Mode	Dry status: 1=Set; 0=Not set	1 bit	C R - T -	enable

107	Fan	Fan: 1=Up; 0=Down	1 bit	C - W - U
-----	-----	-------------------	-------	-----------

3.3 Description of communication objects

Object	Object 0: On/Off - Turn on/off the machine
Function	1 bit communication object to turn on or turn off the machine
Description	Climate machine turns on writing a '1' through this object of communication and off with a '0'
Object	Object 1: On/Off - Turn on/off the machine status
Function	1 bit communication object to know the status of the machine
Description	By reading on this communication object, it is possible to know the on/off status of the climate machine
Object	Object 2: Setpoint – Setpoint temperature sent
Function	2 bytes communication object to write a new temperature setpoint value.
Description	This communication object allows to set a new temperature setpoint for the machine.
Object	Object 3: Setpoint – Setpoint temperature sent status
Function	2 bytes communication object to know or notify the setpoint temperature value.
Description	This communication object allows to notify to KNX bus or know by reading the current setpoint temperature.
Object	Object 4: Mode - Mode: 0=Auto; 1=Heat; 3=Cool; 9=Fan; 14=Dry
Function	1 byte communication object to change the operating mode of the climate machine
Description	By this communication object it is possible to set the operating mode of the climate machine. This object is visible just in case the parameter which allows to dispose only heat/cooling modes is disabled.
Object	Object 5: Mode - Mode status: 0=Auto; 1=Heat; 3=Cool; 9=Fan; 14=Dry
Function	1 byte communication object to read or notify the operating mode of the climate machine
Description	By this communication object it is possible to know via notifications or reading the operating mode of the climate machine. This object is visible just in case the parameter which allows to dispose only heat/cooling modes is disabled.
Object	Object 6: Fan - Fan: 0-50%=Low; 51-100%=High
Function	1 byte communication object to change the fan speed of the climate machine
Description	By this communication object it is possible to change the fan speed. This object is visible just in case user selects two speeds for the machine.
Object	Object 7: Fan - Fan status: 0-50%=Low; 51-100%=High
Function	1 byte communication object to read the fan speed of the climate machine
Description	By this communication object it is possible to know via notifications or reading the fan speed of the climate machine. This object is visible just in case user selects two speeds for the machine.
Object	Object 8: Temperature – Temperature: Received from machine
Function	2 bytes communication object to read or notify the ambient temperature measured by the climate machine (The reference GW630200 does not receive the temperature from the machine)
Description	By this object ambient temperature measured by the machined is read or notified.

Object	Object 10: Window - Open window: 0=Close; 1=Open
Function	1 bit communication object for the activation of open window protection.
Description	If a '1' is received through this communication object, for example, a magnetic sensor indicating the opening of a window, the device will give the order to turn off the climate machine allowing energy savings. When receiving a '0' through this same communication object, the machine will return to the state it was previously in case of selecting this option in the parameter set for that purpose. This communication object will only be available if the option open window protection in the parameters tab is enabled.
Object	Object 12: Swing – Swing: 0=Fixed position; 1=Motion
Function	1 bit communication object to establish the movement of the slats
Description	By writing a '1' through this communication object, the movement of the slats will be free while it is set fixed with a value of '0'.
Object	Object 13: Swing - Swing status: 0=Fixed position; 1=Motion
Function	1 bit communication object to read the movement of the slats
Description	Through this communication object it is possible to read or notify the current movement of the slats
Object	Object 14: Swing – Swing: 0-80%= Fixed position; 100%=Motion
Function	1 byte communication object to establish the opening of the slats.
Description	Writing through this communication object, the position or movement of the slats is established.
Object	Object 15: Swing - Swing status: 0-80%=Fixed position; 100%=Motion
Function	1-byte communication object for the reading or notification of the opening of the slats
Description	Through this communication object it is possible to read or notify the percentage of opening or movement of the slats of the climate machine
Object	Object 16: Internal ERROR – Internal ERROR: 0=No error; 1=Error
Function	1 bit communication object to read or notify an internal error of the machine
Description	Through this communication object it is read or notified if an internal error of the climate machine is received
Object	Object 18: External ERROR – External ERROR: 0=No error; 1=Error
Function	1 bit communication object to read or notify an external error of the machine
Description	Through this communication object it is read or notified if an external error of the climate machine is received
Object	Object 19: External ERROR – External ERROR: Type
Function	1 byte communication object to notify the type of the external error received from the machine
Description	Through this communication object it is notified the type of the external error received from the machine
Object	Object 102: Scenes – Scenes
Function	1 byte communication object for the execution or recording of scenes
Description	Through this communication object it is possible to execute or record scenes
Object	Object 103: Mode – Mode: 0=Cool; 1=Heat
Function	1 bit communication object to select the mode of the machine between cooling and heating.

Description	By means of this communication object, the operating mode of the climate machine is chosen between the cooling and heating modes. This communication object will only be available in the case that two unique modes are chosen in the corresponding parameter.
Object	Object 104: Mode – Mode status: 0=Cool; 1=Heat
Function	1 bit communication object to notify the machine mode between cooling and heating.
Description	By means of this communication object, the operating mode of the climate machine is read and notified between the cooling and heating modes. This communication object will only be available in the case that two unique modes are chosen in the corresponding parameter.
Object	Object 105: Fan - Fan: 0-33%=Min; 34-67%=Med; >68%=High
Function	1 byte communication object to set the speed of the machine.
Description	By means of this communication object it is possible to set the fan speed of the machine. This communication object will only be available if three levels of ventilation are selected using the corresponding parameter.
Object	Object 106: Fan – Fan status: 0-33%=Min; 34-67%=Med; >68%=High
Function	1 byte communication object to read or notified the speed of the machine.
Description	By means of this communication object it is possible to read or notify the ventilation speed of the machine. This communication object will only be available if three levels of ventilation are selected using the corresponding parameter.

3.4 Parameters

3.4.1 General

1.1.1 DKAC-I/MBAC-I > General

General

<p>Modes</p> <hr/> <p>Fan</p>	<p>Machine control</p> <p>Type of control <input type="radio"/> Slave <input checked="" type="radio"/> Master</p> <p>Swing <input type="radio"/> Yes <input checked="" type="radio"/> No</p> <p>Configuration after voltage recovery <input type="radio"/> Yes <input checked="" type="radio"/> No</p> <hr/> <p>Temperature control</p> <p>Setpoint temperature limits <input type="radio"/> Enable <input checked="" type="radio"/> Disable</p> <p>Temperature measured feedback <input type="radio"/> Yes <input checked="" type="radio"/> No</p> <hr/> <p>Other functions</p> <p>Window opening protection <input type="radio"/> Yes <input checked="" type="radio"/> No</p> <p>Scenes <input type="radio"/> Yes <input checked="" type="radio"/> No</p> <p>Error handling <input type="radio"/> Yes <input checked="" type="radio"/> No</p> <p>Advanced functions <input type="radio"/> Yes <input checked="" type="radio"/> No</p>
-------------------------------	---

Parameter	Type of control
Value	Slave / Master

Description	This parameter allows the use of the air conditioning gateway in master or slave mode, in case this last mode is supported.
Parameter	Swing
Value	Yes / No
Description	This parameter allows to enable the control options on the slats of the climate machine. A tab will appear in the left part of the window for that purpose.
Parameter	Configuration after voltaje recovery
Value	Yes / No
Description	This parameter allows to enable the options that allow the selection of the modes in the start of the gateway after recovering tension. A tab will appear in the left part of the window for that purpose.
Parameter	Set point temperature limits
Value	Enable / Disable
Description	If the measured temperature transmission parameter is set as cyclically or both, this additional parameter allows defining the period for sending notifications in seconds.
Parameter	Temperature measured feedback
Value	Yes / No
Description	Allows the enabling of notifications to the KNX bus or the reading of the temperature measured by the climate machine. By enabling this option, the time interval between notifications will be available for selection.
Parameter	Window opening protection
Value	Yes / No
Description	Enables the activation of the window opening protection that allows an energy saving of the installation.
Parameter	Scenes
Value	Yes / No
Description	This parameter allows you to configure or record scenes on the device. A new tab will be enabled in the left part of the window for that purpose.
Parameter	Error handling
Value	Yes / No
Description	This parameter allows to enable the communication objects by which the gateway notify the internal and/or external errors of the machine.
Parameter	Advanced functions
Value	Yes / No
Description	With this parameter the logical unit and timers of the gateway are enabled.

3.4.2 Modes

In the configuration tab of the operating modes, the following options are available:

1.1.1 DKAC-I_MBAC-I > Modes

General One object per mode Yes No

Modes Only cool/heat modes Yes No

Fan

– Setpoint temperature limits

Configuration

Parameter	One object per mode
Value	Yes / No
Description	It allows to have an independent communication object for each mode. New writing and notification communication objects will be enabled for this purpose.
Parameter	Only cool/heat modes
Value	Yes / No
Description	It allows to have only the heat and cold mode.

3.4.3 Fan

General Step control Yes No

Modes Number of levels 2 levels (2 steps) 3 levels (3 steps)

Fan

+ Setpoint temperature limits

+ Window opening protection

+ Initial configuration

+ Scenes

+ Advanced functions

Parameter	Step control
Value	Yes / No
Description	It allows to enable a communication object to increase or decrease the speed step by step.
Parameter	Number of levels
Value	2 levels (2 steps) / 3 levels (3 steps)
Description	This parameter allows to select between two or three levels of ventilation speed.

3.4.4 Setpoint temperature limits

From this window it is possible to choose a maximum and minimum limit for setpoint temperatures. Each of the modes, cold and heat ones, will have a minimum and maximum value between which the setpoint temperature can be varied.

1.1.1 DKAC-I_MBAC-I > Setpoint temperature limits > Configuration

General	Heat mode	
Modes	Minimum	16
Fan	Maximum	32
Setpoint temperature limits	Cool mode	
Configuration	Minimum	16
Window opening protection	Maximum	32
Initial configuration		
Scenes		
Advanced functions		

3.4.5 Window opening protection

The window opening protection allows the energy saving in the installation so that if a magnetic sensor is associated with the corresponding communication object, the machine will turn off automatically with the opening of the window. This will happen after a delay time or instantaneously, depending on what is selected in the parameter *Delay to switch off when window opens*. The machine will recover the previous state if the option is selected using *the Go to last status when window closes*.

1.1.1 DKAC-I_MBAC-I > Window opening protection > Configuration

General	Delay to switch off when window opens	30 sec
Modes	Go to last status when window closes	<input type="radio"/> Yes <input checked="" type="radio"/> No
Fan		
Setpoint temperature limits		
Configuration		
Window opening protection		
Configuration		
Initial configuration		
Scenes		
Advanced functions		

3.4.6 Initial configuration

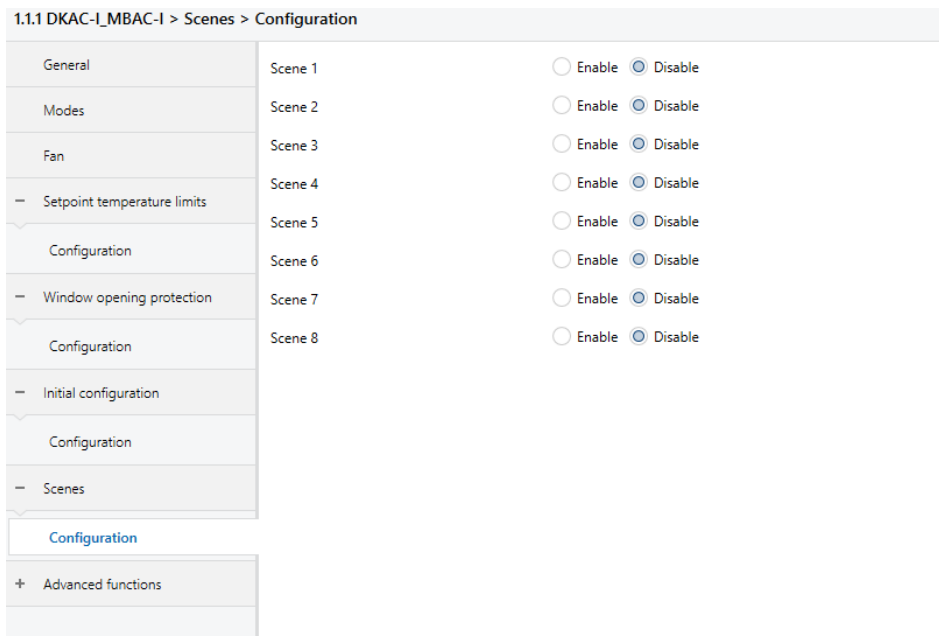

1.1.1 DKAC-I_MBAC-I > Initial configuration > Configuration

General	On/off	Last
Modes	Setpoint temperature	<input type="radio"/> Last <input checked="" type="radio"/> Custom
Fan	Initial temperature	16
– Setpoint temperature limits	Mode	Last
Configuration	Fan	Last
– Window opening protection	Swing position	Last
Configuration		
– Initial configuration		
Configuration		
+ Scenes		
+ Advanced functions		

Parameter	On / off
Value	Last, ON, OFF
Description	Status to which the gateway will put the machine when giving power supply
Parameter	Setpoint temperature
Value	Last / Custom
Description	It allows to choose between an initial setpoint temperature defined in the <i>Initial temperature parameter</i> that is enabled with the <i>Custom</i> option.
Parameter	Mode
Value	Last, Auto, Heat, Dry, Heat, Cool
Description	It allows to choose the mode to which the machine will be placed after recovering power supply.
Parameter	Fan
Value	Last, minimum, maximum
Description	It allows to choose the fan speed between the minimum and maximum values
Parameter	Swing position
Value	Last, Position 1-5, Motion
Description	It allows to choose the position of the slats of the climate machine after recovering tension

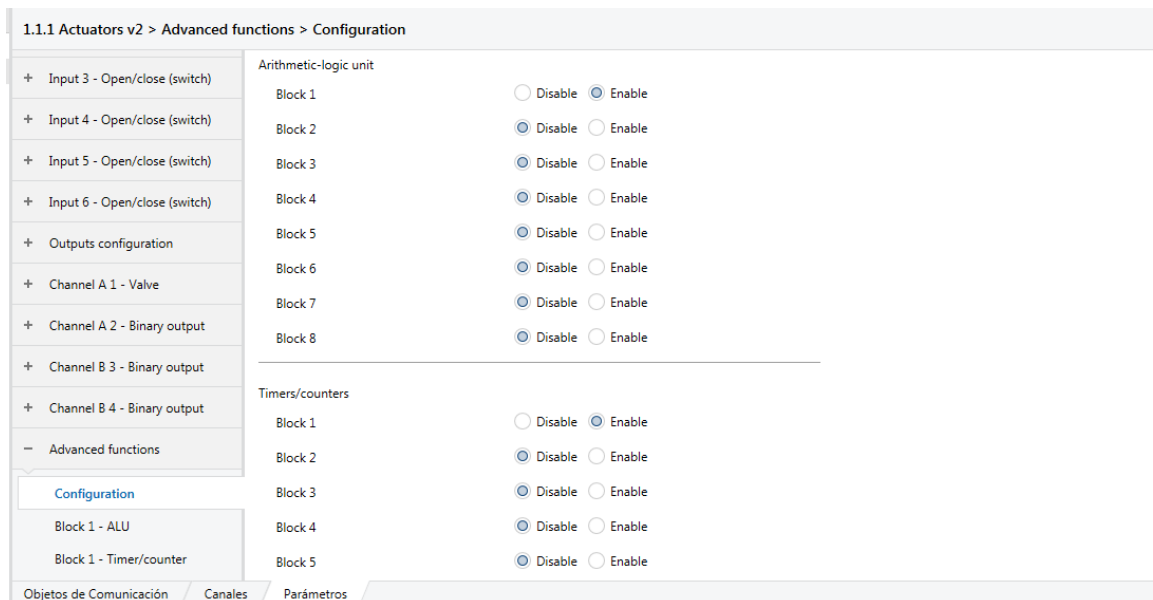

3.4.7 Scenes

The device allows to configure up to 8 scenes and the selection in them of the different parameters of the machine: modes, setpoint temperature, on / off, etc.

3.5 Advanced functions

If the advanced functions are enabled in the General menu, a new submenu appears on the left.

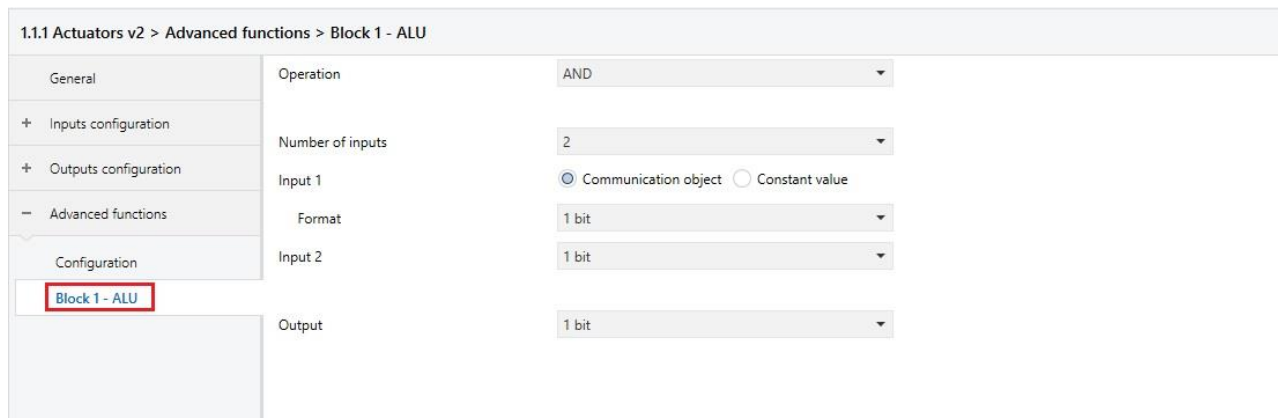

In this configuration menu it is possible to select what Arithmetic and logic or timers / counters blocks are enabled.

Name	Arithmetic-logic block X
Values	Enable / Disable

Description	Allows to enable or disable each arithmetic and logic block.
Name	Timer / counter block
Values	Enable / Disable
Description	Allows to enable or disable the each timer / counter blocks.

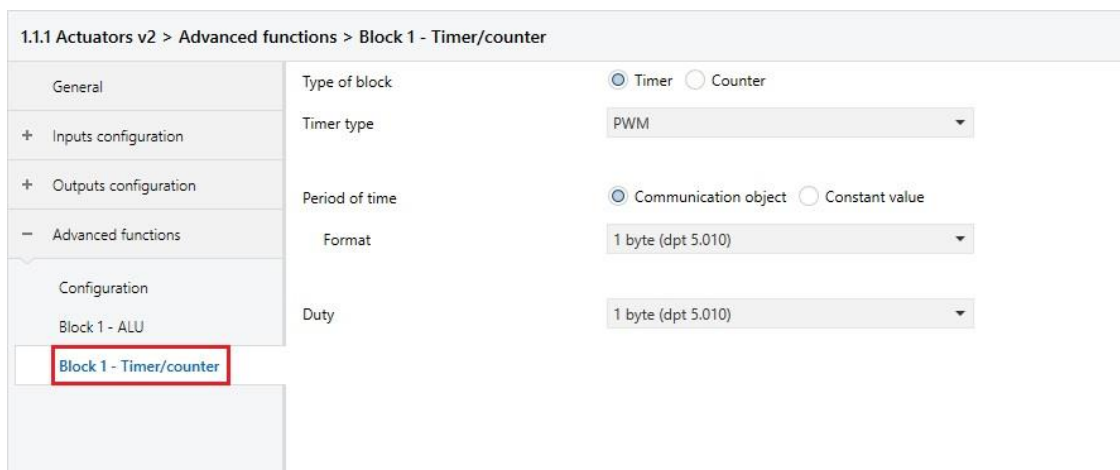

3.5.1 Arithmetic and Logic block (ALU)

Name	Operation
Values	AND, NAND, OR, NOR, XOR, XNOR, NOT, BUFFER, == , != , < , > , <= , >= , + , - , * , / .
Description	<p>It allows to select the arithmetic or logic operation of the block:</p> <p>Logic operations:</p> <ul style="list-style-type: none"> - AND: Logic product - NAND: Negative logic product - OR: Logic addition - NOR: Negative logic addition - XOR: Exclusive logic addition - XNOR: Negative exclusive logic addition - NOT: Negation - BUFFER: Saves the input value in the output. <p>Comparison operation:</p> <ul style="list-style-type: none"> - == : equality - != : inequality - < : smaller than - > : greater than - <= : smaller or equal than - >= : greater or equal than <p>Arithmetic operations:</p> <ul style="list-style-type: none"> - + : addition - - : subtraction - * : multiplication <p>/ : division</p>

Name	Number of inputs
Values	From 2 to 4
Description	This parameter defines the number of inputs of the block. Depending on the type of operation it is allowed two or more inputs.
Name	Input 1
Values	Communication object / Constant value
Description	This parameter allows to select the type of the input 1, that can be a constant value or a value received from a communication object.
Name	Format
Values	1 bit, 1 byte unsigned (dpt 5.001), 1 byte unsigned (dpt 5.010), 1 byte signed (6.*), 2 bytes unsigned (dpt 7,*), 2 bytes unsigned (dpt 8,*), 2 bytes float (dpt 9,*).
Description	This parameter allows to select the size and format of the input 1. Depending on the type of operation different formats are allowed.
Name	Input 2/3/4
Values	1 bit, 1 byte unsigned (dpt 5.001), 1 byte unsigned (dpt 5.010), 1 byte signed (6.*), 2 bytes unsigned (dpt 7,*), 2 bytes unsigned (dpt 8,*), 2 bytes float (dpt 9,*).
Description	This parameter allows to select the size and format of the other inputs communication objects. Depending on the type of operation different formats are allowed.

3.5.2 Timer / counter block

Name	Timer type
Values	PWM, Limit, Cyclic
Description	PWM: It generates a pulse width modulated output according to the period of time and a duty.

Limit: It sends a bit telegram '1' to the bus when a limit value is exceeded.

Cyclic: It sends a bit telegram '1' to the bus each time the limit value is exceeded cyclically.

Name	Period of time
Values	Communication object / Constant value
Description	<p>It is the count time of the timer. It can be configured as a constant value or a value received through the bus with one of the following communication object formats:</p> <p>1 byte (dpt 5.010): Value from 0 to 255 (x 100 ms) 2 bytes (7.004): Value from 0 to 6553500 ms 2 bytes float (9.010): Value from 0 to 670760 s</p>
Name	Duty
Values	1 byte (dpt 5.010), 2 bytes (7.004) or 2 bytes float (9.010)
Description	<p>Only visible if timer type PWM is selected. It is the time that the output signal is at high level ("1") within the period of time. Its value can be received through the bus with one of the following communication object formats:</p> <p>1 byte (dpt 5.010): Value from 0 to 255 (x 100 ms) 2 bytes (7.004): Value from 0 to 6553500 ms 2 bytes float (9.010): Value from 0 to 670760 s</p>

1.1.1 Actuators v2 > Advanced functions > Block 1 - Timer/counter

General	Type of block	<input type="radio"/> Timer <input checked="" type="radio"/> Counter
+ Inputs configuration	Counter type (increase with)	Rising edge
+ Outputs configuration	Limit value	10
- Advanced functions	Output behavior	Send 1 if limit reached
Configuration		
Block 1 - ALU		
Block 1 - Timer/counter		

Name	Counter type
Values	Rising edge, falling edge, 1 or 0
Description	It is the change that the counter may detect in its “event” object to increase the count.
Name	Limit value
Values	From 0 to 65535
Description	It is the number of events over which the counter sends the finish telegram.
Name	Output behaviour
Values	Send 1 when limit reached, Send counter value (5.010), Send counter value (7.001)
Description	This parameter allows to select the format and behaviour of the counter output. It can be send a 1 when the count limit is reached or it can send the count value each time an event is detected.

4 Installation

DKAC-I:

MBAC-I:

DKAC-D:

MDAC-K:

PNAC-K:

PANASONIC BUS

Direct connection to the PANASONIC AC device BUS (2 wire, with polarity).

LGAC-D:

Feed the low voltage lines (bus and inputs) in separate conduits of the 230 V power supply in order to ensure that there is sufficient insulation and thus avoid interference.

Do not connect the 230 V mains voltage or any other external voltage to any point on the bus or to the inputs.
