

➔ **DH** [DH · DH-BUS]

Optical smoke detector

Allows detection of fire by the presence of smoke.

➔ **DH**

Contact detector prepared for KA or KCtr by smartbox connection.

- For direct connection to KA/KCtr
- Mounted on the ceiling (surface)
- Size: 60 x 85 x 58mm

➔ **DH-BUS**

Detector prepared for KCtr by wire connection.

- For BUSing® connection
- Mounted on the ceiling (surface)
- Size: 60 x 85 x 58mm

Description

This kind of detectors are mounted on the ceiling and detect the presence of smoke in the room where are located.

- Optical detectors are designed to be placed in areas where there is usually the presence of smoke, ie. hallways, rooms, etc.
- They are also installed when you cannot install thermovelocimetric detectors, being areas where although there is smoke, you cannot wait, in case of a fire, for the temperature to rise above the critical thermovelocimetric value.

Configuration using Development System (SIDE)

- 2 programmable scenes for activation and deactivation of the BUSing® sensor (reference: DH-BUS).
- Up to 60 programmable BUS events for each scene.

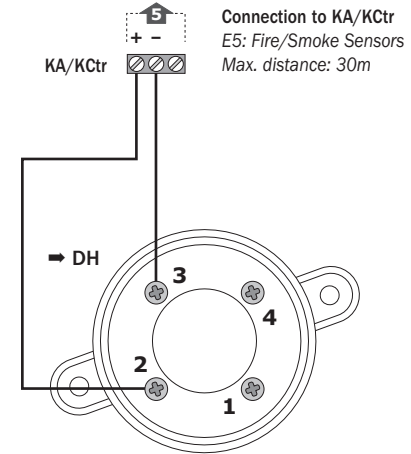

Technical Characteristics

Device Reference	Voltage Supply	Current Consumption	Max. Recommended Distance
DH	9–16V DC (KCtr)	20mA	30 m*
DH-BUS	9–16V DC (BUS)	160 µA (off) / 25mA (on)	–

* maximum recommended distance between sensor and KA/KCtr

➔ **DH**

Installation

Connection of additional DH sensors
Up to 3 sensors can be connected directly to the KA or KCtr input.

➔ **DH-BUS**
